

**Choosing the Perfect  
Aluminium Doors and Windows for Your Home**

## About us

Mahalaxmi Glass & Aluminium is a reputable company that specializes in the production of top-quality aluminium window and door systems. Our products are meticulously designed and manufactured to meet the highest standards of quality, ensuring that our customers receive only the best. We take great care to ensure that our products meet the stringent quality parameters required for high-end windows and doors before they are made available to our valued customers. With Mahalaxmi Glass & Aluminium, you can rest assured that you are getting the best products that are built to last.

## PRODUCTS

Mahalaxmi Aluminium has established a renowned brand in the manufacture, supply and installation of steel, UPVC and aluminum doors and windows. Our extensive product range includes UPVC, Aluminum, Aluminum Handrails, Aluminum Partitions and Facades, Fire Rated Doors and BT Wrapped Doors. Our products are made from the best grade material and are of very high quality Available in different colors, sizes and shapes to meet your needs.

## UPVC

uPVC is a generic abbreviation for unplasticized polyvinyl chloride. This is a very useful material that is widely used today in doors and windows. One thing that is certain when PVC is used in door and window construction is that it must be wrapped around a galvanized steel core, and this galvanized steel always makes the PVC more resistant. PVC is used extensively because, unlike other fabrics like wood, it doesn't suffer as easily from climate change, and the best part is that it lasts longer without such prior repairs. If you want to improve your home, install PVC windows and doors

## Aluminium

When you invest in new aluminum windows and doors, you need beautifully crafted and expertly designed products that not only enhance your home, but the way you live in it. Mahalaxmi Fenestration Systems windows and doors help you make the most of the view and flood your home with natural light. They open up the living space to the outside and bring it outside. They offer the perfect combination of sleek, modern design and proven product performance. Not only does the look great, but decades of system technology has ensured that it will perform fantastically for many years to come. Of course, you can relax knowing that they have all been rigorously tested to withstand the most extreme tropical weather conditions.

## ALUMINIUM INTERNAL PARTITIONS

Our partition systems have been designed to provide maximum flexibility, empowering architects, builders, and contractors to revolutionize tomorrow's workspace. The Partitions are available in various sizes, and the profiles can be configured in many unique ways depending on the requirements.

## ALUMINIUM RAILINGS

We are a great variety of fencing and railing systems characterized by minimal design, extreme robustness, and enhanced levels of safety. Ideal for residential and commercial use, they surround various spaces and balconies by providing safe and comfortable privacy while upgrading the building's aesthetic without the need for any material costs.

# ALUMINIUM GLASS FACADE

Façade is a French origin word meaning the front face. The use of glass in the exterior facades provided more light and an excellent ambiance to the building's occupant, giving rise to the increasing use of glass. From the architectural perspective, the use of glass gave an aesthetic view to the building itself. Glazed façades are built around light and views. From double skin glazing and low iron glass to fritted glass, glazed facades come in many shapes and sizes. More generally, contemporary glazed facades are often built to span multiple floors while addressing lateral loads and sway. Resisting air and water infiltration of glazed façade systems can provide a way to alleviate environmental conditions while still opening up to the larger context. The following showcase a range of new glazed façade details, taking a deeper look at the products, manufacturers, and fabricators that bring these projects to life. As a sampling of glazing systems, the designs illustrate different framing and installation types and how modern glazed façades can be specified today

# ALU Steel

We are Proud to be a sole manufacturer of a unique product called alusteel door window, a combination of steel and aluminium, to cater to the demand of India's price-conscious market. All brackets insert made of GP sheet & PVC/Die carted Brackets, gaskets are EPDM type (Ethyle Propylene Diamine Monomer). The finished products are powder coated and do not fade as we use the best quality pure polyester powder. It is chemically pre-treated, electronically charged by spray guns and baked @180-200 degrees to give strong bonding

## FRAMELESS GLASS DOORS

interior frameless glass doors in a range of glass choices including clear glass, satin glass, sandblasted designs, tinted glass and colours.

Glass door solutions for single and double doors in both hinged/swing options, and sliding glass doors. Glass doors are available with side panels and top panels to make stunning glass partitions / room dividers.

## GLASS SHOWER CUBICLE

Glass shower partitions have become an integral part of the modern bathroom. Besides serving the functional purpose of separating wet & dry areas, a glass bathroom partition provides elegance and style to the bathroom. Shower enclosures keep the bathroom dry, hygienic and safe. By restricting the water inside the wet room, shower enclosures keep the entire bathroom dry, thus making it bacteria free and hygienic.

## DOME SKYLIGHTS

The dome shape design required careful attention to material selection and design detail that lasted several years. Single layer steel tube structure is used to accommodate the complex geometry and high load requirements. The glass dome consists of a single-layered, braced steel structure covered in thermal insulated tempered glass panels—one piece per grid. Higher reliability of steel structure work, strong earthquake proof, quick to be assembled accurately, larger interior space.
